FINISHES GUIDE

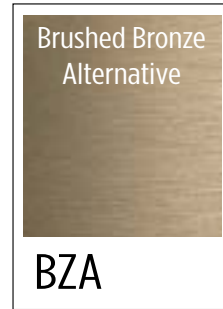

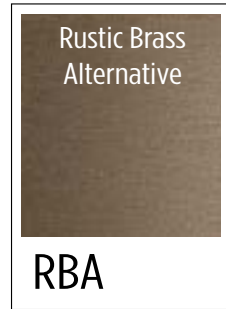

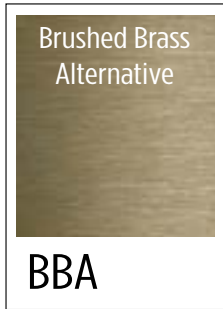

VOLUME 9

Powder Coat Paint Finishes

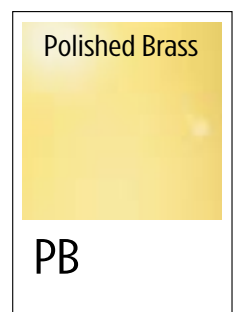

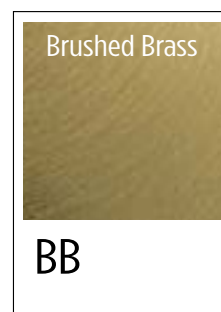

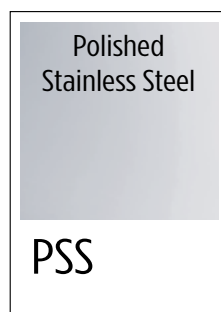

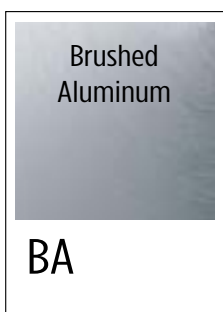

For more information about our finishes visit <https://www.visalighting.com/finishes/painted-finishes>

We believe you should have design flexibility without harming the environment or breaking the bank. These specially developed alternative metal finishes utilize a dye application within a UV resistant clear coating over a recyclable aluminum substrate. The end result is natural metal appearance – with fewer environmental issues that can affect building code standards.

All Visa Lighting premium metal finishes are spun, polished, and finished by artisans in our Milwaukee facility. All finishes are grade level 1. Each product specification sheet shows which finishes are available.

Wood Alternative Finishes

Interior design has become increasingly nature-inspired, and the soothing texture and warm tones of real wood are still highly sought after. Our alternative sublimated wood finishes offer a lifelike wood aesthetic that is environmentally responsible, lightweight, and easier to clean and maintain.

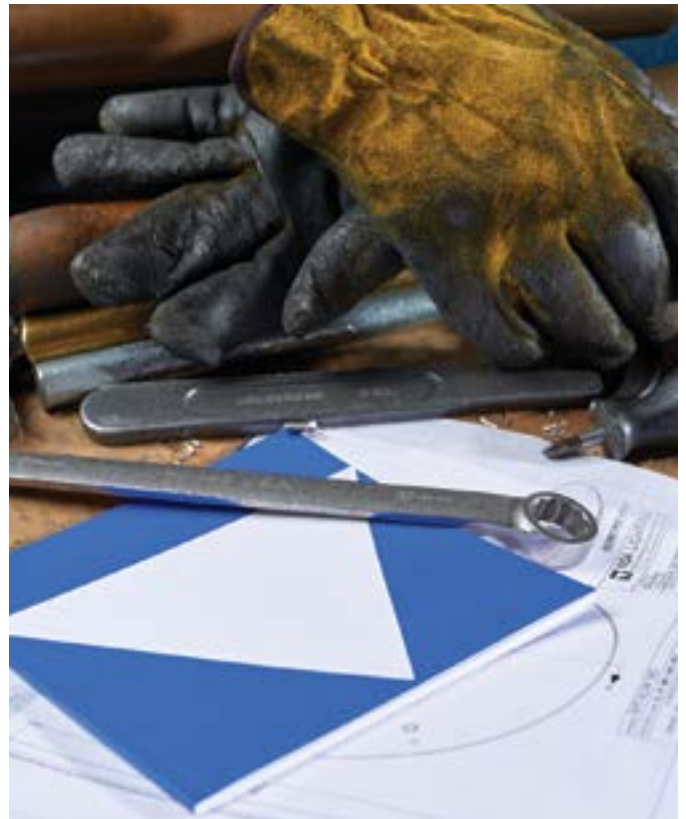

Proudly Made in America

Visa Lighting products have been created by US craftspeople for over 100 years. This wasn't an accident. We know that to you, exceptional product with exceptional service means the right manufacturer is close to home – no matter the industry. We work hard to keep our integrity as an American manufacturer. It gives us an advantage over our competition, and gives you the peace of mind that comes from knowing your lighting product has contributed to American jobs and has been built according to American manufacturing standards.

Our luminaires are created with a blend of old-world craftsmanship and new-world technologies. Highly skilled engineering, manufacturing, and assembly teams ensure fixture quality and artistry, while innovative machining methods ensure consistency and efficiency. The end product is something we can all get behind.

Paint Finishes Inspired By Nature

Visa Lighting's new finishes palette is inspired by nature. These new colors and textures work well with current design trends, while also being carefully chosen as colors that will stand the test of time. Professional interiors, like those found in healthcare, educational, hospitality, and office settings are all striving to feel warmer and more welcoming. Our new palette will not only enhance your designs by bringing that warmth, but also by seamlessly blending our lighting into your space. Plus, these natural tones pair together beautifully with our two color luminaires as well as with our environmentally friendly alternative finishes.

Eco Friendly Finishes

Without using solvents or hazardous materials, our powder coat painting process is more consistent, more durable, and more environmentally friendly than conventional liquid. Designers can choose from various color options without worrying about safety and sustainability.

We offer 21 standard powder coat paint finishes for all of our indoor and outdoor fixtures. This method eliminates runs, drips and sags during the painting process, which results in a higher quality product. Significantly more durable than conventional liquid painting, powder coat paint protects against chips, abrasions, UV light, chemicals, and heat (up to 400° F).

If you have a specific color need, we offer additional RAL colors and custom color matching with a slight premium.

We also offer alternative metal finishes on certain fixtures to attain a metal look without the cost and environmental damage of standard plated metals. Premium metal and acrylics are also available.

Get the look:

Visa Lighting doesn't believe our healthcare specifiers should have to choose between soft lighting that promotes patient healing and stark, bright lights for medical staff. Imagine adding some welcoming color to a clinical environment with a Serenity healthcare scone

that has been trimmed with Sagebrush Green or Baja Beige. A Serenity healthcare table lamp or a Brin bell pendant finished in Terracotta Canyon can bring a subtle warmth that tones down the harsh whites typically associated with sterile facilities.

Natural Oak Wood Alternative

Glacier White

Get the look:

Lend an air of authority to your space with bold colors like our Alpine Green or Deoro Gold finish. These colors really resonate when paired with a modern Theo double rod sconce or a stylish Riff drum pendant light. Visa Lighting's Natural Oak Wood Alternative

finish is stunning when applied to the Visage recessed ceiling and wall luminaire. The sleek, yet practical, Nacelle linear pendant finished in Slate Grey and Glacier White is pleasing to the eye and takes advantage of our ability to apply two complementary finishes.

Inspired by Nature

“The development of our ‘inspired by nature’ palette was motivated by a desire to move on from sterile, minimalist colorways.

These new muted colors are playful enough to make a statement, yet soft enough to feel like a natural element in the modern built environment.”

– *Hans Nielsen*
